# Task: Enhance Your Webpage with Media and Tables

## Objective:

- Add and configure audio and video elements using appropriate attributes.
- Embed external content using the <iframe> tag.
- Create a structured HTML table with headers, rows, and columns.
- Apply core attributes to control behavior and layout of media and table elements.

## Step 1 – Media Section

- Add an <audio> element with controls, and a source file (e.g., .mp3).
- Add a <video> element with controls, width, and a sample .mp4 file.
- Embed a YouTube video using <iframe> with attributes like width, height, src, and allowfullscreen.

# Task: Create Your First Structured Webpage Using Essential HTML Elements

## Step 2 – Table Section

- Create a table with:
- <table>, <thead>, <tbody>, <tr>, <th>, <td>
- Include at least 3 rows and 3 columns.
- Use attributes like border, cellpadding, cellspacing, colspan, rowspan, and width.

# Requirements

Tools:

- Text editor, browser
- Files: create a new one
- Resources: Public links or sample local files for mediaKnowledge Prerequisite: None (this is your starting point!)

# Reminder

**Media elements enrich your page, but always provide controls to allow user interaction. Use tables for structured data only — not for layout.**
