Task: Create a Simple Responsive Webpage Using Bootstrap Basics

Objective:

- Understand and apply Bootstrap classes for layout and styling.
- Import Bootstrap using CDN and understand the alternative (minified file).
- Structure a page using the grid system for responsiveness.
- Use Bootstrap components like buttons, navbars, and images. Apply utility classes for colors and spacing.

Step 1 – Setup

- Start an index.html file.
- Add Bootstrap via CDN in the <head>.

Task: Create Your First Structured Webpage Using Essential HTML Elements

Step 2 – Grid & Layout

- Create a container with a row and 2 columns.
- Use responsive grid classes like col-md-6.

Step 3 – Add UI Components

- Insert a navbar at the top.
 - Place a button inside one column.
 - Add a responsive image with img-fluid.
- 

Task: Create Your First Structured Webpage Using Essential HTML Elements

Step 4 – Style Using Classes

- Apply Bootstrap text and background color classes.
 - Add some margins and padding using spacing utilities.
- 

Requirements

- Tools: Code editor, web browser
- File: index.html
- Link: <https://getbootstrap.com/>

Reminder

Bootstrap lets you build responsive layouts quickly using ready-made classes—don't reinvent the wheel!

Use the grid to organize content, and combine utility classes to style fast.
